Proxmox Host Inspection Report

Document Version:	1.0
Prepared By:	Hafiz Mohd Rizal
Date:	July 2026

1. Executive Summary

Inspection of Proxmox VE host **rm1dev** via MCP API on July 13, 2026. The host is a dual-socket Intel Xeon server running Proxmox 9.1.1 with 125.8 GB RAM and 40 CPU cores. Two QEMU virtual machines are configured (one running, one stopped). Storage consists of a 5.5 TB LVM volume (empty), a 136.5 GB LVM-thin pool, and a 66 GB boot disk.

2. Host Details

Property	Value
Hostname	rm1dev
Proxmox Version	9.1.1 (pve-manager/ 9.1.1/42db4a6cf33dac83)
Kernel	Linux 6.17.2-1-pve (SMP PREEMPT_DYNAMIC)
Boot Mode	EFI
Uptime	~2.9 hours (10,616 seconds)
SSL Fingerprint	DC:5A:3F:5D:18:26:7A:D5:89:E7:F6:96:25:E0:66:4C:6E:55:BD:D5:A0:9C:B1:AE:F1:AC:0D:46:EF:CB:D5:26

3. CPU

Property	Value
Model	Intel Xeon E5-2470 v2 @ 2.40GHz
Sockets	2
Cores per Socket	20
Total vCPUs	40
Clock Speed	2,801 MHz
Current Usage	~4%
Load Average (1/5/15 min)	1.75 / 1.28 / 0.97

---

4. Memory

Property	Value
Total	125.8 GB
Used	9.2 GB
Available	116.6 GB
Swap Total	8 GB
Swap Used	0 GB
Usage	~7.3%

---

5. Storage

5.1 Storage Overview

Name	Type	Total	Used	Available	Usage
local	Directory	66.1 GB	50.5 GB	12.2 GB	76.4%
local-lvm	LVM-thin	136.5 GB	51.7 GB	84.8 GB	37.9%
data2	LVM	5.5 TB	5.5 TB	0 GB	100%

5.2 Notes

- **data2**: 5.5 TB LVM volume created on PERC H710 RAID. Currently empty (no logical volumes). Configured as PVE storage for `images` content type.
- **local-lvm**: Primary storage for VM disks (rootdir, images). VM 100 disk resides here.
- **local**: Boot disk for Proxmox host (ISOs, templates, backups, imports). At 76% capacity.

---

6. Virtual Machines

6.1 VM 100 — ubuntu-rm1dev (Running)

Property	Value
Status	Running
VMID	100
CPU	8 cores (host passthrough)
Memory	50 GB
Disk	100 GB (local-lvm, SCSI, virtio-scsi-single)
Network	2x virtio (vmbr0, vmbr1)
BIOS	OVMF (UEFI)
Machine	q35
Agent	Enabled (qemu-guest-agent)
Uptime	~2.9 hours
CPU Usage	~9.4%
Memory Usage	6.5 GB / 50 GB

6.2 VM 101 — FNT-DEMO (Stopped)

Property	Value
Status	Stopped
VMID	101
CPU	4 cores
Memory	16 GB
Disk	40 GB (local-lvm, SCSI, LSI controller)
Network	2x e1000 (vmbr0, vmbr1)
BIOS	SeaBIOS
Serial	Socket

6.3 LXC Containers

No LXC containers are configured on this host.

---

7. Network

7.1 Interfaces

Interface	Type	IP Address	Gateway	Bridge Ports	Status
vmbr0	Bridge	192.168.0.101/24	192.168.0.1	nic0	Active
vmbr1	Bridge	10.90.39.1/24	—	(none)	Active
nic0	Ethernet	—	—	—	Manual
nic1	Ethernet	—	—	—	Manual
nic2	Ethernet	—	—	—	Manual
nic3	Ethernet	—	—	—	Manual

7.2 DNS

Property	Value
DNS Server	8.8.8.8
Search Domain	lab.local

7.3 Notes

- **vmbr0** is the management bridge (192.168.0.101) connected to physical NIC nic0.
- **vmbr1** (10.90.39.1) is an isolated bridge with no physical uplink — used for inter-VM communication.
- Four physical NICs are available (nic0–nic3), but only nic0 is bridged.

---

8. Summary & Recommendations

Area	Status	Notes
CPU	Healthy	4% usage, load average well within capacity
Memory	Healthy	7.3% usage, 116.6 GB available
Storage (local)	Warning	76.4% used — consider cleanup of old ISOs/backups
Storage (local-lvm)	Healthy	37.9% used, sufficient for current VMs
Storage (data2)	Ready	5.5 TB allocated, empty, ready for use
VMs	Normal	1 running, 1 stopped
Network	Normal	Management and isolation bridges operational

Recommendations

1. **Local storage cleanup** — The boot disk is at 76% capacity. Remove unused ISO images and old backups.
2. **data2 utilization** — The 5.5 TB volume is empty. Begin provisioning NFS shares or additional VM storage as planned.

3. **FNT-DEMO VM** — Currently stopped. Start or decommission to free allocated resources.
4. **DNS configuration** — The `librenms.rm1.com` domain resolves to IPs not matching this server. Update DNS records to point to 202.168.65.34 (public) or 192.168.0.101 (internal).
5. **Time sync** — Timezone not configured on the host. Set to local timezone for accurate logging.
